#### DESCRIPTION

#### QUINAZOLINONE DERIVATIVES

#### 5 Technical Field

This invention relates to novel quinazolinone derivatives having pharmacological activity, to a process for their production and to a pharmaceutical composition containing the same.

### 10 Background Art

Poly(adenosine 5'-diphaspho-ribose)polymerase ["poly(ADP-ribose)polynerase" or "PARP", which is also sometimes called "PARS" for "poly(ADP-ribose)synthetase"] is an enzyme located in the nuclei of cells of various organs, including muscle, heart and brain cells. PARP plays a physiological role in the repair of strand breaks in DNA. Once activated by damaged DNA fragments, PARP catalyzes the attachment of up to 100 ADP-ribose units to a variety of nuclear proteins, including histones and PARP itself.

Some quinazolinone derivatives having inhibitory activity of PARP have been known, for example, in WO95/24379, WO98/33802 and WO99/11624.

compound (I-b) or its salt to reduction.

The reduction is carried out by chemical reduction, catalytic reduction, or the like. Suitable reducing agents to be used in chemical reduction are a combination of metal [e.g. tin, zinc, iron, etc.] or metallic compound [e.g. chromium chloride, chromium acetate, etc.] and an organic or inorganic acid [e.g. formic acid, acetic acid, propionic acid, trifluoroacetic acid, p-toluenesulfonic acid, hydrochloric acid, hydrobromic acid, etc.]. Suitable catalysts to be used in catalytic reduction are conventional ones such as platinum catalyst [e.g. platinum, platinum black, platinum oxide, etc.], palladium catalyst [e.g. reduced nickel, nickel oxide, Raney nickel, etc.], or the like.

## Example 9

2-{[4-(4-Phenyl-3,6-dihydro-1(2H)-pyridinyl)butanoyl]amino}benzamide (475 mg, 1.31 mmol) was dissolved in dioxane (5 mL). An aqueous solution of sodium hydroxide (1M, 3.92 mL) was added to the solution at room temperature, and the mixture was stirred 15 at that temperature for 15 hours. The organic materials were extracted with chloroform, and the organic layer was washed with water and dried over sodium sulfate. Recrystalization of the crude product from chloroform-methanol gave 2-{3-[4-phenyl-3,6-dihydro-1(2H)-pyridinyl]propyl}-4(3H)-quinazolinone (329 mg, 72.9 %).

20  $^{1}$ H NMR (200MHz, CDCl<sub>3</sub>,  $\delta$ ): 2.05 (2H, quint., J=6.0 Hz), 2.66 (2H, t, J=6.0 Hz), 2.81-2.94 (4H, m), 3.31 (2H, d, J=3.2 Hz), 6.12 (1H, t, J=2.9 Hz), 7.21-7.49 (7H, m), 7.61-7.72 (2H, m), 8.23 (1H, d, J=6.6 Hz) Mass (APCI): 346.20 (M+H)

### Example 27

Under a nitrogen atmosphere, 1M boron tribromide in dichloromethane (1.99 ml)

was added to a solution of

2-{3-[4-(4-methoxyphenyl)piperidin-1-yl]propyl}-4(3H)-quinazolinone (150 mg) in
dichloromethane (7.5 ml) at 0 °C. The mixture was stirred for 2 hours and the solvent was
evaporated. The residue was diluted with aqueous sodium hydrogencarbonate and the
aqueous phase was removed with decant. The crude product was triturated with a mixture

of chloroform and methanol (10:1) and the resulting precipitate was collected by filtration.

The precipitate was washed with chloroform-methanol and dried under reduced pressure to
afford 2-{3-[4-(4-hydroxyphenyl)piperidin-1-yl]propyl}-4(3H)-quinazolinone (122 mg).

Under a nitrogen atmosphere, dimethylsulfoxide (0.093 ml) in dichloromethane
30 was added to a stirred solution of oxalylchloride (0.06 ml) in dichloromethane (10 ml) at
-78 °C. The mixture was stirred for 1 hour. To this solution was added a solution of
2-{3-[4-(4-hydroxymethyl)phenyl]-3,6-dihydropyridin-1(2H)-yl}propyl}4(3H)-quinazolinone (130 mg) in a mixture of dichloromethane (1.5 ml) and
dimethylsulfoxide (0.5 ml) at -70 °C. The mixture was stirred for 30 minutes and to this
35 solution was added triethyl amine (0.25 ml) at the same temperature. The whole mixture
was gradually warmed to -20 °C and the reaction was quenched with water. The

aqueous layer was separated and the organic layer was washed with brine, dried over magnesium sulfate. After evaporation of the solvent, the residue was purified by preparative TLC eluting with chloroform-methanol to afford 2-{3-[4-(4-formylphenyl)-3,6-dihydropyridin-1(2H)-yl]propyl}-4(3H)-quinazolinone 5 (47mg).

### Example 30

3-Chloro-2-({4-[4-(4-cyanophenyl)-3,6-dihydro-1(2H)-pyridinyl]butanoyl}amino) benzamide (152 mg, 0.359 mmol) was dissolved in a mixed solvent of dioxane (2 mL) and methanol (3 mL). An aqueous solution of sodium hydroxide (1 M, 1.08 mL) was added to 15 the solution at room temperature, and the mixture was stirred at that temperature for 1hour.
